EDUCATION

University of Guelph

Bachelor of Computing, Software Engineering (Minor: Business)

Guelph, ON

2019-09 – 2023-05

- **Achievements:** Graduated with Distinction — Dean's Honours List
- **Relevant Courses:** Cloud Computing, Parallel Programming, Software System Development & Integration

TECHNICAL SKILLS

Languages: Python, SQL, TypeScript, JavaScript, Java, C, HTML/CSS

Frameworks: LangChain, Pydantic, React.js, Flask, Node.js, Express, Playwright, Selenium

Tools/Cloud: Anthropic API, OpenAI API, AWS, AWS S3, Docker, Postman, Git, Jira

Practices: Agentic AI, LLM Integration, Prompt Engineering, CI/CD, RESTful API Design, Agile, BDD

EXPERIENCE

Automation Engineer

2024-03 – present

Express Scripts Canada

Mississauga, ON

- Automated API and data validation with REST assertions and Oracle SQL across 50+ endpoints, ensuring consistency between services and databases
- Engineered a data provisioning tool generating 1,000+ test users in staging, enabling large-scale performance validation under production-like conditions
- Designed and scaled a Java automation framework with Selenium, JUnit, Cucumber, and Maven; built 25+ reusable components that cut manual QA by 75%
- Identified high-risk edge cases through developer code reviews, reducing post-release defects by 30% across 10+ release cycles

Software Developer Intern

2021-05 – 2022-04

Hammond Power Solutions

Guelph, ON

- Improved operational efficiency by 50% across North American operations through workflow automation
- Automated form validation and email notifications, cutting average request response time by 40%
- Built a custom issue-tracking system managing 100+ internal requests, streamlining intake and categorization
- Integrated custom SharePoint forms with Excel reporting, eliminating 80% of manual data entry errors

PROJECTS

Job Apply Agent | Python, Claude API, LangChain, Playwright, Pydantic

- Built an end-to-end agentic AI system that scrapes JD postings, tailors resumes and cover letters via Claude, and autonomously fills ATS forms
- Engineered an anti-hallucination system in Pydantic that ties every generated bullet to a real profile achievement, rejecting fabrications at parse time
- Designed a typed pipeline (JobPosting → ResumeContent → PDF) with Pydantic schemas, Jinja2 templates, and Playwright for HTML-to-PDF rendering

gimmit | TypeScript, Anthropic API, OpenAI API, VS Code API

- Built a VS Code extension that reads git diffs and generates conventional commit messages, eliminating the friction of writing commits manually
- Integrated Anthropic and OpenAI APIs for AI-generated commit descriptions grounded in actual diff content
- Published as a developer tool that fits into existing git workflows without disrupting them

UniSearch | Python, Flask, React, Playwright, NGINX

- Automated course data collection using Playwright scrapers with structured JSON output for fast querying
- Created a full-stack web application to search and compare 300+ university courses across 2 institutions
- Deployed a Flask REST API and React frontend behind NGINX for scalable request handling

AWS S3 Management Shell | Python, Boto3, AWS S3

- Constructed a Python CLI for managing AWS S3 file transfers, reducing manual cloud operations by 50%
- Implemented 10+ commands for uploading, copying, deleting, listing, and syncing S3 objects via Boto3
- Abstracted complex SDK calls into reusable modules to simplify error handling and harden CLI workflows
