## EDUCATION

### University of Guelph

Bachelor of Computing, Software Engineering (Minor: Business)

Guelph, ON

2019-09 – 2023-05

- **Achievements:** Graduated with Distinction — Dean's Honours List
- **Relevant Courses:** Cloud Computing, Parallel Programming, Software System Development & Integration

## TECHNICAL SKILLS

**Languages:** Python, SQL, TypeScript, JavaScript, Java, C, HTML/CSS

**Frameworks:** LangChain, Playwright, Pydantic, React.js, Next.js, Flask, Selenium, Cucumber

**Tools/Cloud:** Claude API, Anthropic API, OpenAI API, AWS S3, Docker, Postman, Git, Jira

**Practices:** Agentic AI, LLM Integration, Prompt Engineering, CI/CD, RESTful API Design, BDD, Agile

## EXPERIENCE

### Automation Engineer

2024-03 – present

Express Scripts Canada

Mississauga, ON

- Designed and scaled a Java automation framework with Selenium, JUnit, Cucumber (BDD), and Maven; built 25+ reusable components that expanded regression coverage and cut manual QA by 75%
- Automated API and data validation with REST assertions and Oracle SQL across 50+ endpoints, ensuring consistency between services and databases
- Engineered a data provisioning tool generating 1,000+ test users in staging, enabling large-scale performance validation under production-like conditions
- Identified high-risk edge cases through developer code reviews, reducing post-release defects by 30% across 10+ release cycles

### Software Developer Intern

2021-05 – 2022-04

Hammond Power Solutions

Guelph, ON

- Improved operational efficiency by 50% across North American operations through workflow automation
- Built a custom issue-tracking system managing 100+ internal requests, streamlining intake and categorization
- Integrated custom SharePoint forms with Excel reporting, eliminating 80% of manual entry errors
- Automated form validation and email notifications, cutting average request response time by 40%

## PROJECTS

### Job Apply Agent | Python, Claude API, Playwright, Pydantic, LangChain

- Built an end-to-end AI agent that scrapes JD postings, tailors resumes and cover letters via Claude Sonnet, and autonomously fills ATS forms
- Engineered an anti-hallucination system in Pydantic that ties every generated bullet to a real profile achievement, rejecting fabrications at parse time
- Designed a typed pipeline (JobPosting → ResumeContent → PDF) with Pydantic schemas, Jinja2 templates, and Playwright for HTML-to-PDF rendering

### gimmit | TypeScript, Anthropic API, OpenAI API, VS Code API

- Built a VS Code extension that reads git diffs and generates conventional commit messages, eliminating the friction of writing commits manually
- Integrated Anthropic and OpenAI APIs for AI-generated commit descriptions grounded in actual diff content
- Published as a developer tool that fits into existing git workflows without disrupting them

### touchline.ai | React, Express, PostgreSQL, Supabase

- Developed 20+ REST APIs with JWT-based authentication and role-based authorization using Express
- Designed normalized PostgreSQL schemas and migrations to support multi-tenant team and session data
- Integrated cloud storage via Supabase for secure media uploads and team asset management

### AWS S3 Management Shell | Python, Boto3, AWS S3

- Constructed a Python CLI for managing AWS S3 file transfers, reducing manual cloud operations by 50%
- Implemented 10+ commands for uploading, copying, deleting, listing, and syncing S3 objects via Boto3
- Abstracted complex SDK calls into reusable modules to simplify error handling and harden CLI workflows
